

Simplifying Mobile Technology for Public Safety and Government

Modern public safety and government operations depend on mobile technology, yet managing devices, applications, OEM partners, security, and refresh cycles has become increasingly complex. PCN Strategies serves as the integrator that brings it all together.

An integrator fills the gaps organizations don't have the time, staff, or specialized expertise to manage internally. PCN Strategies provides the guidance, industry knowledge, and OEM partner coordination needed to design, deploy, and manage mobile technology ecosystems that simply work.

We don't just deliver equipment or financing. We orchestrate how technology, applications, connectivity, and services function together in the field.

What Is Mobile Orchestration?

Mobile orchestration is the coordinated management of devices, applications, connectivity, and security on a single mobile platform. In public safety environments, this means ensuring every application, sensor, and system works together seamlessly without creating friction for the user.

Through mobile orchestration, PCN Strategies helps agencies improve:

- Operational continuity across shifts, vehicles, and departments
- Connectivity between devices, networks, and cloud platforms
- Security for data, evidence, and communications
- Efficiency by simplifying workflows in the field

By combining technical expertise with strong industry partnerships, PCN enables agencies to deploy mobile solutions that support mission-critical operations, not slow them down.

Why an Integrator Matters

Public safety agencies face growing pressure to modernize technology while operating within tight budgets and limited internal resources. Common challenges include:

Managing multiple OEM partners with little coordination

Aging hardware tied to capital purchases

Complex device and application environments

Security risks across mobile platforms

Inconsistent refresh and replacement cycles

Without an integrator, these challenges create inefficiencies, downtime, and higher long-term costs.

The PCN Strategies Approach

PCN Strategies acts as a single point of accountability, managing OEM partners, aligning technologies, and ensuring solutions are designed around real-world public safety workflows.

We integrate:

- Mobile devices (MDTs, tablets, cameras, peripherals)
- Applications (CAD/RMS, evidence management, mapping, reporting)
- Connectivity (wireless infrastructure, data plans, secure access)
- Security and compliance
- Lifecycle management and financial services

Rather than forcing agencies to purchase and own rapidly depreciating technology, PCN supports OPEX-based subscription and rental models that provide predictable, all-inclusive costs.

Public Safety Use Cases

Law Enforcement

- MDTs and in-car technology delivered as a service
- Integrated cameras, evidence systems, and mobile applications
- Secure, managed environments with predictable annual costs

Fire & EMS

- Rugged mobile devices with real-time reporting and dispatch integration
- Simplified deployment and replacement across vehicles
- Reduced downtime through lifecycle management

State & Local Government

- Mobile workstations for field inspections and public works
- Standardized devices and applications across departments
- Centralized OEM partner management and support

Why PCN Strategies?

PCN Strategies brings together financial services, mobile technology, OEM partner management, and lifecycle expertise under one model. We help agencies move away from fragmented purchasing and toward orchestrated, future-ready mobile environments that support mission success today and tomorrow.

Experience the difference an integrator can make.

Let PCN Strategies help you simplify mobile technology, control costs, and stay ahead of change.
